

Video Downloader 👍

Make sure yt-dlp is installed: `pip install yt-dlp`

Basic Usage

Download a Single Video

```
bash
python video_downloader.py --urls "https://example.com/video-url"
```

Download Multiple Videos

```
bash
python video_downloader.py --urls "https://example.com/video1"
"https://example.com/video2" "https://example.com/video3"
```

Download from a Text File

1. Create a text file (e.g., `links.txt`) with one URL per line:

2. text

```
https://example.com/video1
https://example.com/video2
```

3. `https://example.com/video3`

4. Run the script:

5. bash

6. `python video_downloader.py --file links.txt`

Download from a CSV File

1. Create a CSV file with URLs in the first column

2. Run the script:

3. bash

4. `python video_downloader.py --csv links.csv`

Advanced Options

Specify Video Quality

```
bash  
python video_downloader.py --urls "https://example.com/video" --quality 720p
```

Available quality options: best, 720p, 480p, 360p

Extract Audio Only

```
bash  
python video_downloader.py --urls "https://example.com/video" --extract-audio
```

This will download the video and convert it to MP3 format.

Specify Output Directory

```
bash  
python video_downloader.py --urls "https://example.com/video" --output-dir  
"./my_videos"
```

Concurrent Downloads

```
bash  
python video_downloader.py --file links.txt --threads 3
```

Download up to 3 videos simultaneously.
